

Smart IS is proud to announce an exciting milestone in its 30-year journey: we are now Blue Yonder partners! Smart IS has been working in the supply chain industry alongside Blue Yonder for over two decades. This partnership solidifies what has long been recognized: Blue Yonder values our solutions as unique toolsets that enhance and streamline their WMS applications. As official partners, we are now poised to expand our global reach and broaden our customer base. This partnership gives Smart IS access to Blue Yonder's resources, allows for strategic collaboration, and provides more robust support to our clients.

The access and collaboration available at the partner level create extensive possibilities for innovation and growth. This partnership gives Smart IS access to Blue Yonder's product roadmap, enabling us to align our innovations with their strategic direction. Our resources now have direct access to the Blue Yonder Partner Portal, offering real-time updates on the latest developments in the Blue Yonder ecosystem. This ensures we remain agile and responsive to the dynamic needs of our clients and the market. By leveraging this collaboration, Smart IS can continually enhance its offerings, ensuring we stay ahead of industry trends.

While this partnership enhances our strategic alignment with Blue Yonder for future innovation, Smart IS currently offers a range of solutions that directly integrate with Blue Yonder's ecosystem.

For instance, our Smart J-Board allows users to fully customize Blue Yonder dashboards, while AuTest enables Blue Yonder users to automate tests with full control. Smart DDA Converter streamlines the conversion of DDAs to Web UI for both consultants and customers. Warehouse Migrator helps ease the migration of Configuration Sets from lower versions to the higher version of the new BY Data Model, and RF++ delivers enhanced RF screens for Blue Yonder WMS implementations, used on the warehouse floor to perform various functions. Additionally, our Smart Training Portal optimizes user training for the Blue Yonder WMS platform, allowing admins to create and manage a wide range of training scenarios with flexibility and ease.

These are just a few of the innovative Blue Yonder solutions developed by Smart IS. More of our products and services can be accessed at smart-is.com/what-we-do/. There, you can access user guides, demos, and further information on what Smart IS has to offer. This partnership marks a new chapter for Smart IS, positioning us to provide even greater value to our clients and solidifying our leadership in the supply chain technology space.
